

2025/26 Collection

Cool Breeze

Warm Air Re-Circulation

Low Running Costs

Contemporary Style

High quality ceiling fans to help you relax, sleep well, cool down, warm up, feel good, beat jet lag, impress your friends, save energy and improve your life!

What makes Fantasia the right ceiling fan option for you!

Not all ceiling fans are created equal. Yes, we know. The ceiling fan in the Spanish Hotel room in 1987 was terrible, noisy and wobbly and you didn't dare use it. Fantasia fans are not like that. We offer high quality, well balanced motors, designed to run quietly and in a civilised manner.

Control options run from pull cord to remote control, and installations can use drop rods up to 72" 183cm in length for those higher ceilings. Quality and flexibility are key parts of everything we design.

How you will benefit from a ceiling fan?

A ceiling fan will change your life for the better. That's right, you read that correctly. People who have ceiling fans always tell us they couldn't do without one (or 6). People who've bought one often buy another and another.

The feedback from customers is very often "I don't know how I managed without a ceiling fan. Ceiling fans can be the difference between a good night's sleep and a bad night's sleep, they can make a room usable rather than far too hot, they can also even out the temperature in a room so that your radiators or heat pump (!) actually work efficiently and your thermostat actually knows what temperature the room is.

What are these things worth to you?

The Questions we are asked most regularly:

Are Ceiling Fans Noisy?

Everyone has had an experience of a noisy ceiling fan. At Fantasia, our motors are designed to be as quiet as possible and certainly at the higher end of the range we would expect you to be able to sleep under a fan spinning on medium speed all night.

Can I operate the fan and light independently?

A surprisingly common question, the answer is yes. Complete independent control of fan and light is no problem on any Fantasia ceiling fan

The power consumption question - AC/DC, which is best?

Lets face it, Moneytalks, and it Ain't No Fun spending too much on your energy bill, the last place you want to be is on the Highway to Hell. So is AC or DC the better motor option?

Well all Fantasia ceiling fan motors can be considered low energy as they are all below 100w when operated on high speed. DC motors do run with lower power consumption (usually 30-40w) but the main benefit comes with more features that DC motors bring. More speeds (6 rather than 3), and also pulse functions (speed up, slow down, speed up, slow down etc) mean that DC motors are a better choice for some.

Do I need special wiring for a ceiling fan?

No, all Fantasia ceiling fans are designed to run on the 5amp lighting circuit. An earth wire connection is required.

How does the fan attach to the ceiling?

A fixing bracket or plate is included with the fan. It is essential that the ceiling fan is mounted securely to a ceiling joist (not just plasterboard) or conservatory ridge plate.

So you know you want a ceiling fan, but which one?

What Size?

Unless space is an issue then we recommend a 36" fan be the absolute minimum size you should fit in a room. We do make smaller ones but they are really for areas that cannot fit a larger fan. For a standard bedroom a single 42"-52" fan situated above the bed will work well, for a large rectangular lounge you may want to fit 2 x 42" fans or 1 x 52"-56" fan

What colour/finish?

If you want the fan to blend into the ceiling then go for a White finish. After a week or so you'll hardly notice it. If you want the fan to be a feature in the room then Brushed Nickel is lovely. You'll also find other finishes to suit your own décor.

What's your budget?

How much you want to spend will dictate whether you go for a DC motor rather than an AC motor, or if you have remote control operation rather than pull cord. Very generally larger ceiling fans cost a little more too.

Contact us

We're a small family business and we want to help as much as possible but calling us on the phone (particularly in Summer) will not be the quickest way of getting answers to your questions. The best options are:

1. Check the website knowledge base. Your questions will have been asked before and the answer is there. www.fantasiaceilingfans.com.
2. Live chat. Also on our website, we can respond quickly there.
3. Whatsapp. Message us on 07599 095556 and again you will get an answer quickly.

117414

White 54"/137cm
Blades: White

Fun Fact: In high speed the Sirocco fan motor consumes just 35w of energy

Remote Control Included

DC MOTOR

Extra Efficiency

MAX POWER CONSUMPTION

55w

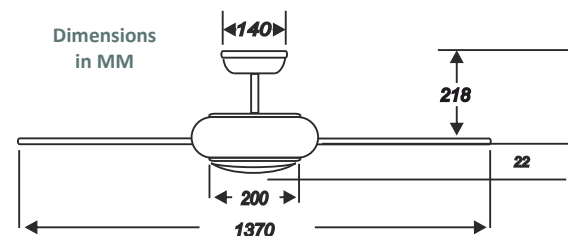

ON HIGH SPEED WITH LIGHT SWITCHED ON

MAX AIRFLOW
7100 CU/FT PER MINUTE

KEY FEATURES AND BENEFITS

- Lovely sleek design
- Complete with remote control system offering 6 speeds in forward & reverse and light on/off/dim, and 1hr, 3hr, 4hr timer
- 20w Dimmable LED light
- Elegant curved blade style
- Reversible - Use in Summer for Cooling and in Winter to re-circulate warm air
- Longer drop rods available

Ideal for Bedrooms, Living Rooms, Orangeries and Conservatories

INSTALLATION

- ★ Always fix to a ceiling joist
- ★ 2 core + Earth wiring required
- ★ Isolation switch recommended
- ★ Ensure minimum clearance of 8"/20cm all around blades for effective airflow

White 36"/920mm
Blades: White
12"/30cm drop rod included

111887

White 48"/1220mm
Blades: White
12"/30cm & 24"/60cm drop rods included

111894

White 56"/1420mm
Blades: White
12"/30cm & 24"/60cm drop rods included

Fun Fact: When spinning on high speed, the blade tip of a 56"/142cm Commercial Fan travels at almost 50mph!

331674 RV-05

Controls up to 5 x fans
forward and reverse
Max 400w

333036 RV-01

Controls 1 x fan
forward and reverse
Max 100w

333029 SIC-1

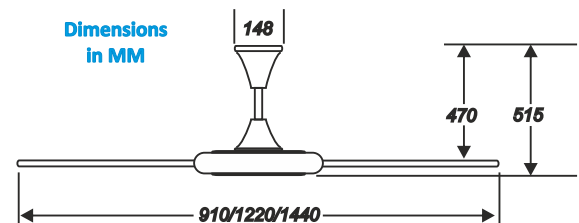

Controls 1 x fan
forward only
Max 100w

KEY INFORMATION

- Minimum 10ft/3m floor to blade clearance required for metal bladed fans
- Efficient air movement
- Use in Summer for cooling and in Winter to re-circulate warm air.
- Note that a wall control is required for reverse function to operate

Dimensions
in MM

INSTALLATION

- ★ Always fix to a ceiling joist
- ★ 2 core + Earth wiring required
- ★ Isolation switch recommended
- ★ Ensure minimum clearance of 8"/20cm all around blades for effective airflow

Note that commercial fans are not recommended for domestic installations

331759 - M3 Remote Control System

RF remote system to suit to suit Mayfair, Capri, Classic & Belaire Fans. Note that this remote system is only compatible with ceiling fans that come with pull cords as standard. Other fans have specific remote control which are not compatible systems

Conversion Kit

Used to convert Mayfair and Capri fans from flush mount to drop mount. Note that the use of a conversion kit will also require a drop rod of the required length to be purchased

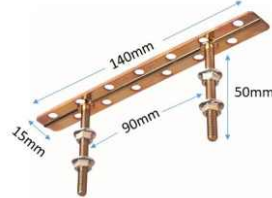

- 331049 - Stainless Steel
- 330257 - Gloss White
- 330035 - Chrome
- 330028 - Antique Brass
- 331063 - Matt Black

449003 - Fan Duster

Ideal for cleaning those hard-to-reach parts of your ceiling fan.

441199 - Big Strip Fastener

This is a fixing for use in conservatories where it can be hard to get a good fixing with just two screws.

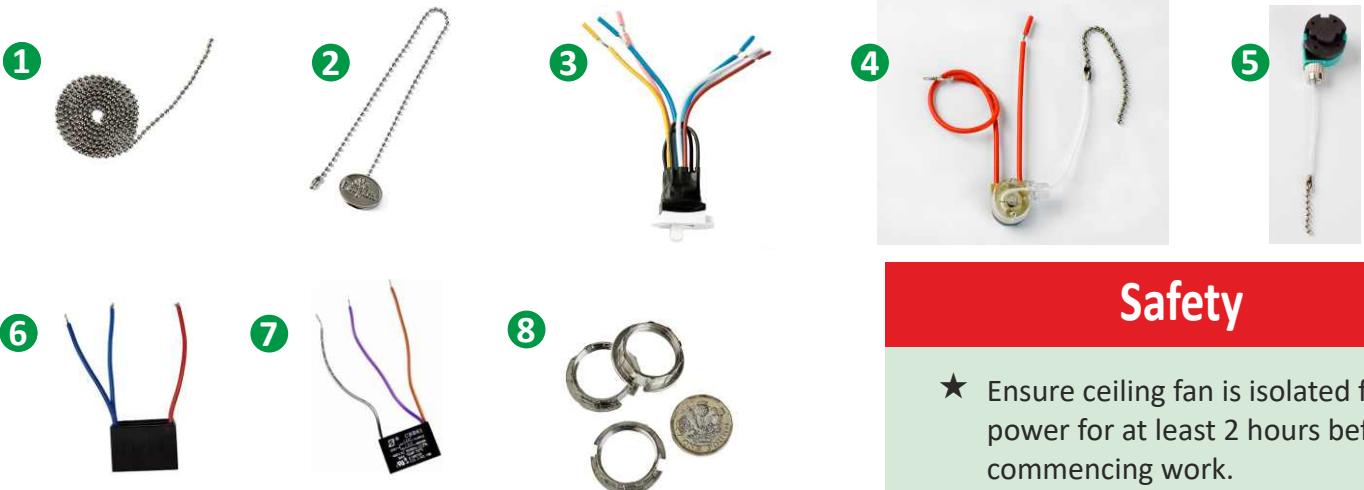

Drop Rods

Used with a conversion kit to convert flush mount to drop mount fans OR used to replace the rod a drop mounted fan comes with. Note that drop rods come in two different diameters of 22 or 27mm OD. Please check compatibility before ordering. Also, Luna and Sirocco fans have their own specific drop rods.

At Fantasia we aim to make the best possible ceiling fans. However, we know they won't last forever, that's why we try to keep spare parts for Fantasia Ceiling Fans for at least 10 years from the date we discontinue a product. We should note that this isn't always possible but we have been fairly successful at it over the last 40 years.

Safety

- ★ Ensure ceiling fan is isolated from power for at least 2 hours before commencing work.
- ★ Test for power isolation against a known source.
- ★ If in any doubt then consult a qualified Electrician

Flush Mount

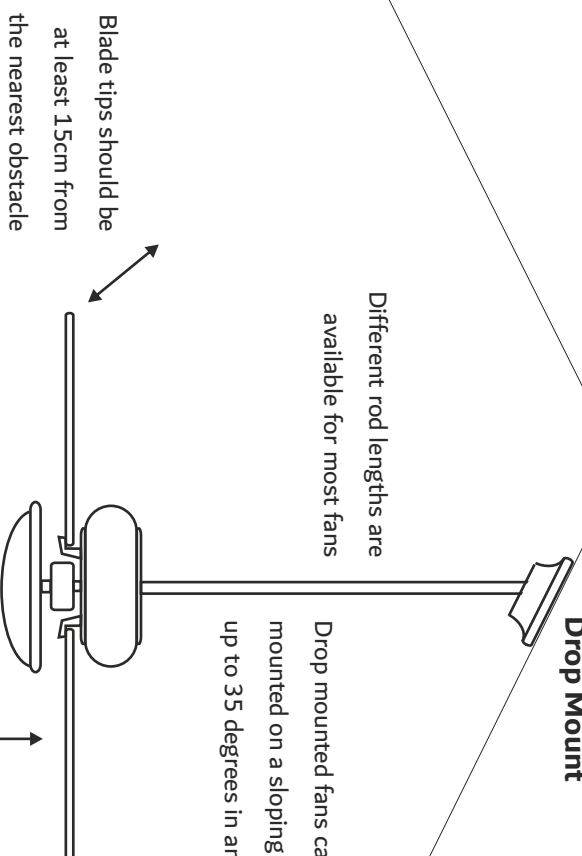

A flush mount ceiling fan can only be mounted on a flat ceiling

Blade tips should be at least 15cm from the nearest obstacle in any direction, eg tie bar, wall or roof beam

Ceiling fans blade should be at least 229cm from the floor

Drop Mount

Different rod lengths are available for most fans

Drop mounted fans can be mounted on a sloping ceiling up to 35 degrees in angle

Blade tips should be at least 15cm from the nearest obstacle in any direction, eg tie bar, wall or roof beam

Ceiling fan blades should a minimum of 229cm and a maximum of 290cm above the floor to be safe and effective

To mount a ceiling fan in a conservatory a 'Big Strip Fastener' would be useful.
